

Agri-Food Toolboxes

Amenity Horticulture

Horticulture

304

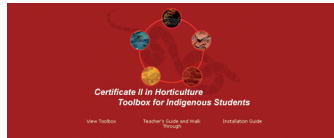

Set in a simulated workplace, learners have the ability to explore the environment in much the same way as they could if they were present in a real setting.

Turf Management

408

Learners have a variety of turf areas to look after including amenities turf, golf fairways and greens, tennis courts and bowling greens as an employee of the virtual resort.

Horticulture for Indigenous learners

422

Horticulture provides realistic workplace scenarios and problems for Indigenous students in horticulture, particularly trainees in rural areas.

and Rural Production

Amenity Horticulture

605

Supports authentic learning in a variety of irrigation activities as well as a range of learning activities in plant, pest and disease and garden design units.

Australian meat Industry

Meat Safety

414

The virtual meatworks is a generic blueprint of processing operations in fictional cattle, pig and small stock facilities. There is also a generic laboratory blueprint.

Conservation and Land Management

Conservation and Land Management

507

Set in a virtual landcare centre, staff, trainees and volunteers carry out landcare activities. Suitable for rural, regional and urban students, at entry-level training.

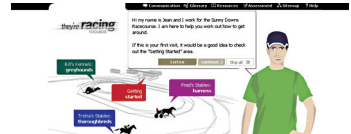

Cultural Resource Management

518

This Toolbox uses simulated Indigenous cultural heritage sites and tasks to allow Indigenous learners to expand on the hands-on learning in this area.

Racing

They're Racing

801

Provides flexible learning opportunities for those working in the three codes of the racing industry; thoroughbred, standardbred and greyhound.

Food Processing

Food Processing

604

Set in a fictitious food processing company which is conducting a training program for existing staff to work in and learn about the work performed in different areas.

Food Safety Auditor

901

Designed around a series of interactive tasks that an auditor would have to complete as part of the process of managing a food safety audit.

Seafood

Aquaculture - Farm Diversification

315

The learning resources are set on a fictitious fish farm, and learners are guided through a range of activities by two farm supervisors. Supports 12 units of competency.

Inland Aquaculture

416

Suitable for learners who are farm managers or farm owners, and who require competencies to manage and/or operate an aquaculture business.
