

Training Package

HLT02 Health

Qualifications

Four competencies have been selected because of their applicability to a wide range of qualifications and employees within the health industry.

Competencies

HLTFS7A Follow basic food safety practices

HLTFS9A Oversee the day-to-day implementation of food safety in the workplace

HLTFS10A Apply and monitor food safety requirements

HLTFS11A Develop food safety programs

Description

Four food safety units of competency from the Health Training Package (HLT02) are the focus of this Toolbox.

Possession of such food safety competencies will contribute to the wellbeing of health service clients and patients within healthcare premises, and will address the national and state food safety legislation and regulations based on the national Food Safety Code.

The Toolbox contains learning materials for self-guided study and group collaboration. It is designed for delivery either as a whole training course or as individual sections. The teaching and learning resources can be applied to online or CD ROM access for classroom and workplace delivery.

The materials are presented around generic food service settings where the learner is given challenges and situations that they would typically encounter in the workplace. The emphasis is on learning by doing – the learner takes on a food related role, and makes decisions that will help the organisation achieve its food safety obligations.
