

### Training Package

DRT03 Drilling Industry

### Qualifications

Supports Certificate II in Drilling

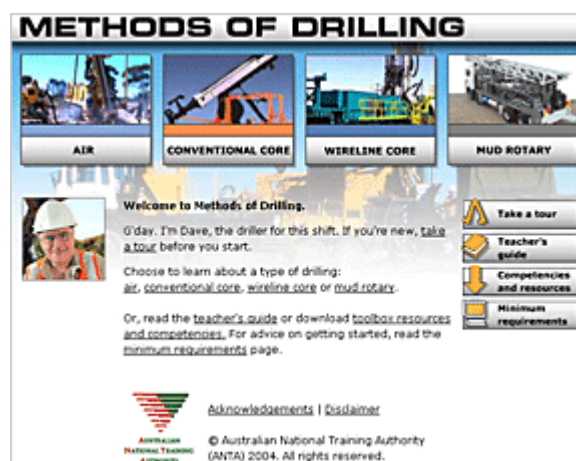

### Competencies

DRTNHB08A Assist air drilling

DRTNHB11A Assist conventional core drilling

DRTNHB12A Assist wireline core drilling

DRTNHB15A Assist mud rotary drilling

### Description

The Methods of Drilling Toolbox introduces new starters, people who have just completed their on-site induction and have started as assistant drillers on site, to the knowledge and experience required for driller's assistants. The learner selects the drilling method that they use on site, and work their way through preparations, operations and sampling on a typical drill site.

The Toolbox utilises multimedia to provide a rich, immersive learning experience. After an initial introduction to the drilling method, the learner joins a drilling crew that is about to go out on shift. The driller for the crew, Dave, is their guide and mentor as the learner completes a Job log as evidence of their learning.

The Job log encourages learners to share knowledge and experiences face-to-face with their drilling crew and virtually, using a discussion forum. It also promotes deep learning and reflection.
